## **DETAILED ACTION**

It has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim(s) 1, 2, 7, 8, 11-13, 22 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. (6,607,573) in view of Hull (4,590,847). Chaurushia et al. discloses all of the limitations of the claim(s) except for adjustable supports. Hull discloses the presence of adjustable supports. See element 50. Hence, one skilled in the art would find it obvious to modify the system of Chaurushia et al. to include the adjustable supports of Hull for the purpose of increased stability. Regarding claim 2, see 22 of Chaurushia et al. Regarding claims 11-13, see 42 of Chaurushia et al.

Claim(s) 3-6, 9, 10 and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. in view of Hull and in further view of Nordlin (5,334,000). Chaurushia et al. in view of Hull discloses all of the limitations of the claim(s) except for a flange supporting a grill. Nordlin discloses the presence of a flange supporting a grill. See 74. Hence, one skilled in the art would find it obvious to modify the system of Chaurushia et al. in view of Hull to include a flange supporting a grill of Nordlin for the purpose of increased support.

Art Unit: 3749

Claims 14 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. in view of Hull. It is well-known in the art of HVAC to design a fan controlled by a switch. Thus, it would have been obvious to one of ordinary skill in the art to incorporate the features of fan controlled by a switch into the system of Chaurushia et al. in view of Hull for the purpose of improved safety.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. in view of Hull. It is well-known in the art of HVAC to design a fan with variable speed. Thus, it would have been obvious to one of ordinary skill in the art to incorporate the features of a fan with variable speed into the system of Chaurushia et al. in view of Hull for the purpose of increased applicability.

Regarding claim 18, Chaurushia et al. in view of Hull discloses all of the limitations of the claim except for the exhaust aperture being in the rear. However, since the applicant has failed to establish any criticality or synergistic results which are derived from the recited configurations, these limitations are considered a matter of obvious design choice. Thus, the applicant's design configurations would have been an obvious improvement to one of ordinary skill in the art with regard to the apparatus disclosed in Chaurushia et al. in view of Hull.

Claims 16 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. in view of Hull. It is well-known in the art of HVAC to design a fan motor with a surge protector. Thus, it would have been obvious to one of ordinary skill in the art to incorporate the features of surge protection into the system of Chaurushia et al. in view of Hull for the purpose of increased durability.

Application/Control Number: 10/795,824

Art Unit: 3749

Claim(s) 25-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chaurushia et al. in view of Hull and in further view of Wilkins (3,912,473). Chaurushia et al. in view of Hull discloses all of the limitations of the claim(s) except for a filter support on the flange. Wilkins discloses the presence of a filter support on the flange. See claim 1. Hence, one skilled in the art would find it obvious to modify the system of Chaurushia et al. in view of Hull to include a filter support on the flange of Wilkins for the purpose of more secure attachment.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The provided references are representative of the state of the art that is applicable to the applicant's invention. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Derek S. Boles at (571) 272-4872 or supervisory patent examiner Kenneth Rinehart at (571) 272-4881.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217/9197/toll-free).
